*Milestone XProtect*

## Solution Overview

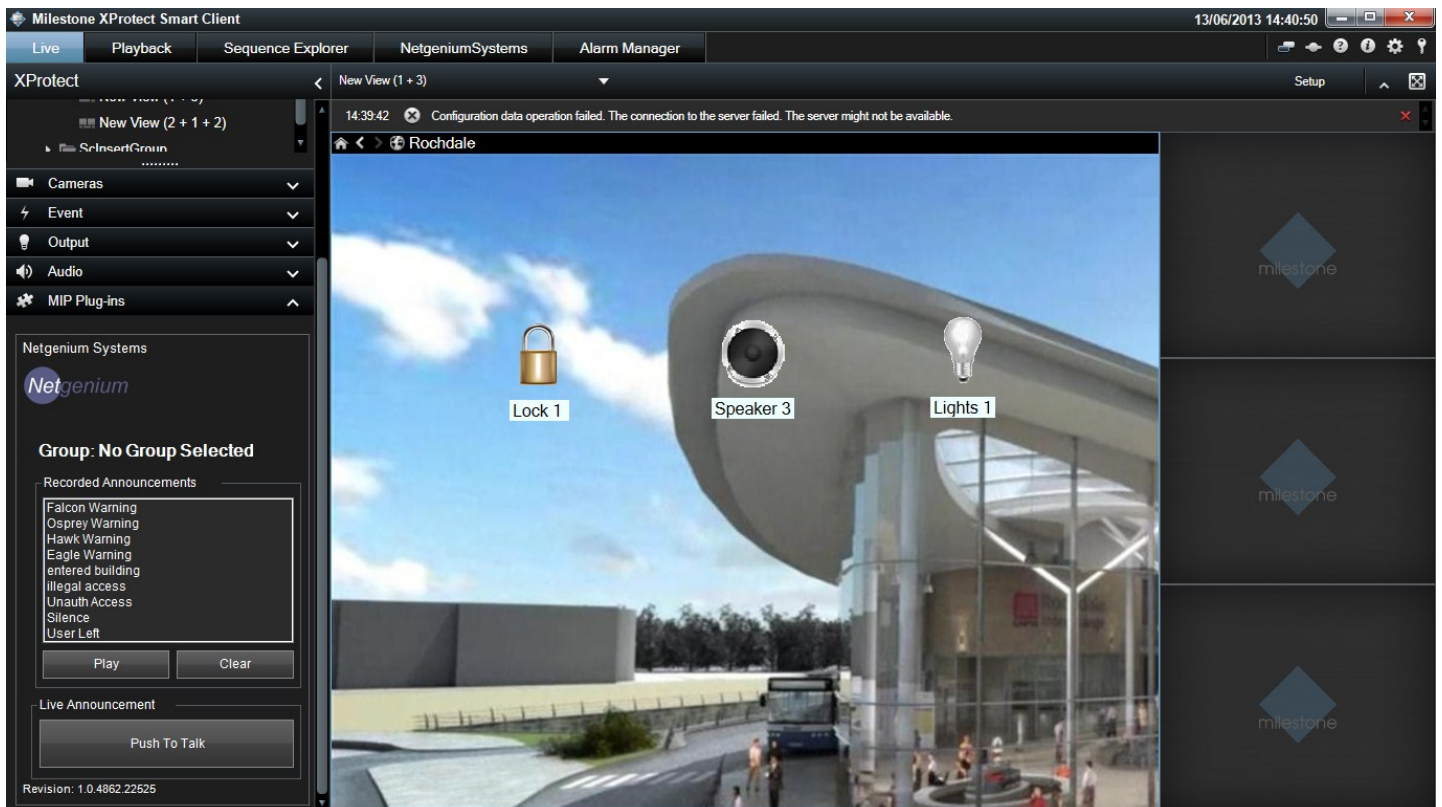

The Netgenium MIP plugin for Milestone's XProtect server extends real time control of Netgenium's physical security, intelligent audio and lighting control solutions into the Milestone Smart Client application.

The plugin's interaction with PolicyServer provides access to and control of all Netgenium end points.

This enables an interactive visual representation of all security devices on the Smart Client MAP, providing each operator with a streamlined and tailored interface.

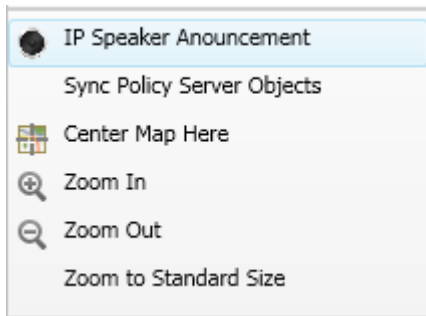

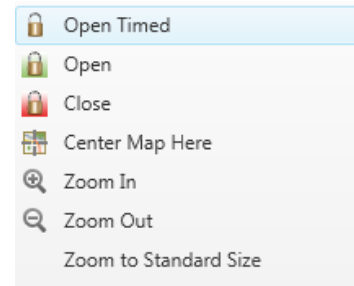

The powerful command set presents the operator with single click control of secured doors and lighting areas, alongside the ability to broadcast live or pre-recorded announcements over selectable paging zones defined on PolicyServer.

## Physical Access Control

The **Physical Access Control** element of the plugin provides a graphical representation of doors on the map view and context menus for full control of the hardware

## Intelligent Audio

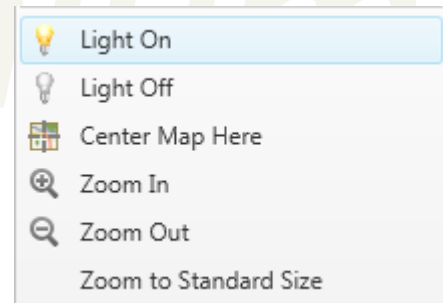

**Intelligent Audio** provides a full featured interface into your PA system. Play pre-recorded announcements to selectable zones or make live announcements with the Push To Talk facility.

## Lighting Control

Lighting Control provides a graphical representation and control of lighting through context menu's.
